

ANIKET DALAL

Applied AI Engineer | Generative AI | LLMs | RAG

+91 73505 31889 | aniketdalal126@gmail.com | linkedin.com/in/aniket-dalal | github.com/aniketdalalml-creator

Professional Summary

Applied AI Engineer with software engineering experience in .NET, Angular, and Spring Boot and hands-on experience building Generative AI and Machine Learning solutions including LLM applications, Retrieval-Augmented Generation (RAG) systems, multi-agent AI workflows, NLP solutions, and ML pipelines. Experienced with Python, LangChain, Hugging Face, vector databases, prompt engineering, FastAPI, REST APIs, Docker, Azure, and model evaluation.

Technical Skills

Programming: Python, SQL, Java, C#, JavaScript

Machine Learning: Scikit-learn, XGBoost, LightGBM, Random Forest, SVM, SMOTE, Hyperparameter Tuning, Model Evaluation

Generative AI & NLP: Generative AI, LLMs, RAG, LangChain, Hugging Face, BERT Fine-tuning, Prompt Engineering, Claude API, Groq LLaMA3, Multi-Agent Systems, Tool Calling

Vector Search & Data: ChromaDB, FAISS, Jina AI Embeddings, Pandas, NumPy, Document Chunking, Semantic Search, Information Retrieval

Backend & Deployment: FastAPI, REST APIs, Node.js, Express, Streamlit, Docker, Azure, Hugging Face Spaces

Software Engineering: .NET, ASP.NET, WinForms, Angular, Spring Boot, Git, MLflow, Evidently AI, Agile/Scrum

Professional Experience

T-Systems ICT India Pvt Ltd

Oct 2024 – Jun 2026

Associate Consultant – Software / Full-Stack Engineer

- Developed and maintained enterprise applications using .NET, ASP.NET, WinForms, Angular, C#, and SQL across the full software development lifecycle.
- Designed and integrated application components and RESTful APIs while collaborating with cross-functional teams to deliver scalable enterprise software features.
- Contributed to application performance optimization, technical-debt reduction, debugging, testing, and production issue resolution within an Agile/Scrum environment.

Confluxsys

Jul 2022 – Dec 2022

Java Developer Intern

- Developed backend modules using Java and Spring Boot and integrated multiple data sources through RESTful APIs.
- Implemented unit and integration testing and contributed to backend software development within an Agile/Scrum environment.

ML / AI Projects

FinQuery – RAG System for Financial Document Q&A Python, LangChain, ChromaDB, Groq LLaMA3, Jina AI, FastAPI

- Built an end-to-end Retrieval-Augmented Generation (RAG) pipeline for SEC 10-K financial filings using document processing, 512-token chunking with overlap, Jina AI embeddings, ChromaDB vector search, and Groq LLaMA3-8B generation.
- Designed retrieval and generation prompts with grounded response constraints to reduce unsupported answers and return “not found in documents” when information was unavailable.
- Implemented chunk-level retrieval relevance scoring, source citations, conversation history, and multi-document retrieval for cross-company financial document analysis.
- Built a Streamlit interface and FastAPI backend with token-level response streaming and containerized the application using Docker.

AI Job Application Agent – Multi-Agent LLM System Claude API, Node.js, Express, Web Search, JSON State

- Built a multi-agent Researcher-to-Writer workflow using Claude API tool calling, live web search, and structured JSON state handoff.
- Designed the Researcher agent to gather company and job context and the Writer agent to generate role-specific resume content and cover letters grounded in retrieved information.
- Built agent-trace visualization and an Express backend for tracking asynchronous application runs and agent state.

Education

PG-DAC – Advanced Computing, CDAC

May 2024 – Sep 2024

B.E. – Computer / Information Technology, Matoshri College of Engineering, Nashik

Jan 2021 – Apr 2023

CGPA: 9.09 / 10

Diploma – Information Technology, Government Polytechnic, Nashik

Oct 2017 – Oct 2020

Percentage: 85.63%

Certifications: Machine Learning Specialization – Coursera, Andrew Ng | Algorithmic Toolbox – Coursera, 2021
